Restaurants & Bars

Commercial & Public Buildings

PERLAM SHEET METAL

Overview

We undertake fabrication and fitting of stainless steel and glass balustrades to customer specification using brushed stainless steel tube and toughened 10mm safety glass. Clients include home owners, architects, builders, interior designers, shop fitters and the general public. For more information see our web site www.perlamsheetmetal.co.uk

Home Owners

Typical work includes replacement of existing wooden stair balustrading with high quality stainless steel and glass balustrading. This work typically involves a partial redesign of the area involved both for the stair balustrading and the landing balustrades.

Architects & Interior Designers

We undertake work at all levels for architects and interior designers including internal and external architectural metalwork. These stainless steel and glass balustrades were for the government home office building in Westminster as part of a complete internal refit.

PERLAM SHEET METAL

Roof Top Terraces

This third floor roof top terrace was fitted with stainless steel and glass balustrading. The balustrading was designed and fitted by Perlam which involved the safe installation of balustrading whilst working at heights. The project was for a Richmond home owner.

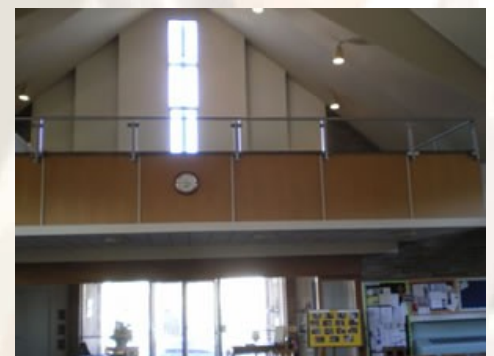

Bars & Restaurants

We have done work for many bars, nightclubs and restaurants fitting all types of stair and landing balustrading. This images to the right show a custom curved stainless steel stair set for a wine bar and custom shelving for a restaurant.

Public Buildings

All types of work can be undertaken, the bottom right image shows a stainless steel and glass balustrade that was installed along a church balcony. The need for raising the balcony height in this manner was driven by their insurance company who said the existing balcony height was too low for public use. The image of a statue on the front page shows stainless steel foot rails at Kew Gardens.
