PERLAM SHEET METAL

Overview

We undertake fabrication and fitting of architectural metalwork to customer specification complete with a primed and powder coated finish. Our work ranges from garden gates and railings for home owners through to architectural metalwork for landlords, architects, interior designers and builders. For more information see our web site www.perlamsheetmetal.co.uk

Home Owners

Typical work includes garden railings and gates including decorative motifs as well as balconies, name plaques and handrails. Perlam can undertake full design and installation as well as removal of existing fences, railings and fixtures. Fabrication and painting is done off site which reduces site installation time.

Architects & Builders

We work closely with architects and builders for all types of projects from staircases and balconies through to mezzanine platforms, structures and sheet metal facades & soffits. As a small dynamic company we offer a flexible service suited to most requirements..

PERLAM SHEET METAL

Staircases

All types of internal and external metal staircases can be fabricated, including spiral stair sets. Our customers typically include home owners, landlords, schools, government agencies and commercial architects. We are also specialist fabricators of stainless steel and glass balustrading.

Structural Metalwork

A range of secondary structural metalwork can be undertaken from security grilles, platforms and canopies through to mezzanine floors and walkways. This type of work is generally for architects and builders. Finishes include galvanising and powder coating as required.

Lighting & Interiors

Lighting and interior furniture & fittings can be fabricated to specification. The image bottom right shows a set of 13 lamp shades which were each manufactured from 20 gold anodised aluminium component parts for a large London new build office development. We also fabricate much smaller items such as stainless steel and glass coffee tables, table lamps and room fittings. This service is supported by our experience in general sheet metalwork.
